

PRECISION BORESCOPIES

Exceptional quality and value!

Made in USA

In 1995, the first Hawkeye® Precision Borescope broke new ground. Using our newly developed endoGRINs® gradient index lenses, we became able to offer image quality similar to the finest borescopes made anywhere in the world, and do so at one-third the price!

Today, Hawkeye® Classic Rigid Borescopes are as great a value as they have always been. Hawkeye Classic Borescopes are used by building inspectors, technicians, sportsmen, manufacturers, and more. Exceptional value and quality have made Hawkeye® Rigid Borescopes the world leader in sales of rigid borescopes.

The Mini Maglite® flashlight is bright enough for most subjects, however, you can upgrade to the Hawkeye® SuperNOVA™ Light for brighter light and economy in heavy use. See page 30.

Made in USA

Mini Maglite®
Ample light for close or reflective subjects

Each Hawkeye® Classic Borescope Kit contains:

- Hawkeye® Classic Precision Borescope
- Hawkeye® Mirror Tube
- Mini Maglite® Flashlight and Two AA Batteries
- Rugged Hawkeye® Carrying Case
- Hawkeye® Cleaning Kit

For individual borescopes and kit components see pages 30 - 31.

Classic Slim™
.165" (4.20 mm)

At .165 inches in diameter, Hawkeye® Classic Slim Borescopes are by far our best selling borescopes. They are slim enough to fit into small holes, but provide plenty of light. The result is sharp, bright, clear images. Use Hawkeye Classic Slim Borescopes to inspect bores and cross-holes in machined metal parts.

Classic Hardy™
.250" (6.35 mm)

When access holes are large enough, Hawkeye® Classic Hardy Borescopes bring much more light to the subject. Their rugged, thick-walled stainless steel tubes have an outside diameter of a quarter-inch. Classic Hardys deliver 3x the illumination of the Classic Slim.

The Classic Hardy is ideal for inspecting castings, engine cylinders, internal welds, and pipes.

Hawkeye Classic Borescopes focus by rotating the eyecup. Cameras attach to the eyecup, so they turn too, rotating the image. We recommend Hawkeye® Pro Borescopes with cameras, because their independent focusing rings avoid camera and image rotation.

Made in USA

Multi-Coated Objective Lens
Better contrast & color

90° Mirror
More durable; easy to clean

Classic Slim FOV 42°, DOV 0°

○ Outside Diameter .165 inches (4.20 mm)

DOV 90°

○ Outside Diameter .188 inches (4.80 mm)

Classic Hardy FOV 50°, DOV 0°

○ Outside Diameter .250 inches (6.35 mm)

DOV 90°

○ Outside Diameter .313 inches (8.00 mm)

Hawkeye® Classic Slim Borescopes Kits

| Lengths: 7" 12" 17" and 22" | Model # |
|-------------------------------|-------------|
| 7" Classic Slim Kit (180 mm) | HS07-AF-KIT |
| 12" Classic Slim Kit (305 mm) | HS12-AF-KIT |
| 17" Classic Slim Kit (435 mm) | HS17-AF-KIT |
| 22" Classic Slim Kit (560 mm) | HS22-AF-KIT |

Hawkeye® Classic Hardy Borescope Kits

| Lengths: 7" 12" and 17" | Model # |
|--------------------------------|-------------|
| 7" Classic Hardy Kit (180 mm) | HH07-AF-KIT |
| 12" Classic Hardy Kit (305 mm) | HH12-AF-KIT |
| 17" Classic Hardy Kit (435 mm) | HH17-AF-KIT |
| 22" Classic Hardy Kit (560 mm) | HH22-AF-KIT |

Video and lighting sold separately. See pages 12 - 13 and 28 - 29.
